SUMMARY

Generative AI Developer with 1 years of experience in Python, Machine Learning, and Generative AI. I have built RAG (document Q&A) systems and backend APIs using FastAPI, LangChain, and FAISS. I enjoy building AI tools that actually work in production, from data pipeline to deployment.

SKILLS

Generative AI & LLMs: LLMs, RAG, LangChain, LangGraph, Prompt Engineering, AI Chatbots, Vector Embeddings, FAISS, NLP

Backend, Databases & Cloud: Python, SQL, JavaScript, FastAPI, Django, Flask, Streamlit, REST APIs, MySQL, PostgreSQL, Docker, Git/GitHub, AWS Cloud Essentials

Data & Machine Learning: Pandas, NumPy, Power BI, Matplotlib, Seaborn, EDA, Regression, Decision Trees/Random Forest, XGBoost, SVM, KNN, Clustering, ANN/CNN, GridSearchCV

WORK EXPERIENCE

Software Developer
Aug 2025 – Present

E-Whiz Global Solutions Ltd., Pune

- Build and maintain REST APIs and backend services used for daily business operations.
- Build data validation and cleaning pipelines that reduce manual work and errors in business data.
- Write optimized SQL queries and improve API/database performance using query optimization and caching.
- Automate repetitive business tasks in Python, and build backend services that support AI/ML features.

AI Intern
Jan 2025 – Jul 2025

AlmaBetter, Pune

- Built an intern-allocation platform in Streamlit/Django that automatically assigned 100+ interns to departments based on set rules, replacing a manual process.
- Built a Training Management System to track attendance, scheduling, and feedback for 1,000 trainees.
- Automated Excel-based attendance tracking, cutting manual HR work by nearly 80%.
- Cleaned and validated data for reporting, and built backend logic used by multiple internal web apps.

PROJECTS

RAG-Based AI Assistant for Document Question Answering
Python • LangChain • RAG • FastAPI • FAISS • Docker • REST APIs

- Built a complete RAG (document Q&A) pipeline — from reading documents, breaking them into chunks, creating embeddings, and retrieving relevant text using FAISS, to generating answers with an LLM.
- Built FastAPI endpoints so users could upload documents and ask questions about them in real time.
- Tested different chunk sizes and retrieval settings to get accurate answers quickly, and packaged the app with Docker so it runs the same way anywhere.
- Result: a working assistant that turns any PDF into a chat-like question-and-answer tool.

AI Chatbot Using Large Language Models
Python • LLM APIs • FastAPI • Prompt Engineering

- Built a chatbot using LLM APIs, with a FastAPI backend handling questions and answers.
- Improved the chatbot's answers by testing and refining prompts, so it gave fewer wrong or made-up responses.
- Set up the full flow — writing the prompt, calling the LLM, and cleaning up the response — as a reusable pattern for future chatbot projects.

End-to-End Data Engineering & AI Analytics Platform
Python • SQL • ETL • Web Scraping • APIs • Power BI • AI Chatbot

- Built a pipeline that pulls data into a database, then added an AI chatbot and Power BI dashboards so non-technical users could get answers without writing SQL.
